OMEGA
Environmental Services Ltd

BAE Systems

Value: £160,000.00

Duration: 3 months

Contract location: Glascoed, Wales

Sector(s): Ministry of Defence

Type(s) of work: Asbestos Removal

BAE SYSTEMS

Description of work

Omega Environmental were appointed to carry out the safe removal and disposal of both notifiable and non-notifiable asbestos containing materials from within the premises of the MOD site. All of the OES staff were UKSV (United Kingdom Security Vetting) checked prior to commencing work to ensure the safety of the site and all personnel.

There were wide ranges of various asbestos containing materials which we were required to remove, such as; asbestos insulation boards, insulation debris, cement sheets, cement debris, insulation within radiators, bitumen felt, gaskets, flash guards, fuses, putty, rope and more.

Method of work

The above ACM's were safely removed and disposed under fully controlled or semi-controlled conditions dependent upon the classification of the material. Sufficient risk mitigations methods where used throughout the project in order to minimise the risk of asbestos exposure to site staff and all surrounding personnel.

Client reference:

"I would like to thank you for such a professional service. The Omega team and your site supervisor have been excellent in working with us to complete your project on time and on budget."
