OMEGA
Environmental Services Ltd

Rugeley Power Station

Value: £5.6m

Duration: 5 months

Contract location: Rugeley

Sector(s): Nuclear

Type(s) of work: Licensed asbestos removal

Description of work

Omega Environmental Services secured the £5.6Mil asbestos removal contract due to our expertise in this sector; asbestos remedial works are due to be completed in November 2018 with an estimated project programme of 20 weeks which has been achieved through high levels of thorough planning.

At Omega we make certain the most intricate details are entirely planned for, while implementing quality control assurance methods in order to minimise risk. We understand that project success is achieved via clear and consistent communication from all levels from operatives, project managers and most importantly, the client. Omega personnel guarantee excellent Health, Safety and Environmental practices from start to finish.

We have facilitated the recruitment and management of approximately 40 site and management staff in order to meet crucial deadlines. Each supervisor is delegated with 6 operatives in order to increase management control and improve productivity on site.

Our specification of the works is to remove all notifiable asbestos based materials prior to the dismantling and demolition of the plant which consists of the following:

- Turbines 6 & 7
- All ancillary buildings
- Precipitators 6 & 7
- Boiler and De-aerator bays 6 & 7
