

Trent Park

Value: £480,000.00

Duration: 6 months

Contract location: London

Sector(s): Heritage

Type(s) of work: Asbestos Removal

Description of work

Omega Environmental provided the safe removal and disposal of notifiable and non-notifiable works throughout the estate to multiple buildings. The final phase of this project was the most intricate, due to the nature of the building fabric of the 14th century grade II listed building. We were tasked to remove the pipe lagging insulation from below the protected floorboards.

Method of work

The scope of works included the safe removal of various notifiable and non-notifiable products including pipe lagging, asbestos insulation boards, cement panels, CAF gaskets, cement flue and sleeves, flash guards, woven tiles, bitumen floor tiles and more.

During the final phase of works ACAD carried out a site audit on the site which we are pleased to say achieved a 100% audit score, where Omega Environmental Services were awarded a Certificate of Excellence. Please see the below audit comments:

“The works involved the removal of insulation debris from within floor voids in a Grade 2 listed property. This project has had its challenges but it is testament to Mick Foster, site supervisor, and his experience and supervisory skills that this audit has been exemplary. The site is well laid out and has been segregated from unauthorised access. Excellent client liaison has led to Omega receiving blue level directors audit score which means performance over and above that expected. Mick is very proud of his site and so he should be. He shows excellent control of the site, personnel and client. All paperwork is fully completed and available for inspection. We had a discussion regarding the NPU calculation which he will to management. It has been a pleasure to audit such a good site and witness asbestos removal at this level.”
